

SidewalkPilot Series 3 Steering + Throttle Model Report

Offline evaluation — generated 2026-06-29 10:40 PM

Evaluation Setup

Samples: 2,757 **Input:** 320x180 (BGR) **Sources:** real=2757 **Outputs:** steering 0..180 + throttle 0..1 (2-output unit controls). **Error unit:** servo degrees / throttle fraction.

Caveats: evaluated on the collected run data (not a held-out split), so this reflects fit quality. Throttle was a near-constant 1.0 across this run, so throttle MAE is not a meaningful generalization signal yet.

Best checkpoint: v3.0 — steering MAE 8.352° (median 6.805°).

Model Ranking (lower steering MAE is better)

Version	Steering MAE	Median AE	Max AE	Signed err	Throttle MAE	Pred mean	Target mean
v3.0	8.352	6.805	87.39	-0.371	0.0004	103.1	103.5
v3.0b	9.339	7.527	75.75	+0.729	0.0003	104.2	103.5
